# New Zealand Attack Statistics

The numbers don't lie - attacks in New Zealand (and globally) have skyrocketed. Cybercrime is a rapidly evolving threat and attacks can come from a variety of sources. By staying informed and being proactive, you can help protect your organisation and yourself from cyber-attacks.

Phishing attacks in New Zealand increased by 37%, with over 2,500 reports to CERTNZ in 2022

Ransomware attacks in New Zealand increased by a staggering 23% in Q1 of 2023

Human error is responsible for 90% of cyber incidents in New Zealand

The NZ government has recently adopted a strict 'no-pay' Policy for ransomware attacks
